Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.

Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library is normalized. Library was constructed by Bento Soares and M. Fatima Bonaldo (N-Soares4)."

Claim 12; Fig 1; 63pp; English.

The product has therapuetic use in inhibiting tumour dissemination during chemotherapy and radiation therapy, impurged bone marrow cell harvesting etc. The inhibitor may also be useful in encapsulating tumours aiding clean excision, and in treatment of enphysema, Paget's disease, osteoporosis, scleroderma and bedsores.

The gene product also has application in autoimmune disorders eg. The umatoid arthritis and multiple sclerosis.

"I New human tissue inhibitor of metallo:proteinase-3 - used to "I develop prods. for diagnosis, therapy or prophylaxis of conditions with unwanted matrix metallo:proteinase activity. Disclosure; Fig 6A-B; 87pp; English.

"The protein sequence of human TIMP-2 is compared with the cattle, protein sequence of human TIMP-1, mouse and cattle TIMP-2, and chicken (Ch) and mouse TIMP-1, mouse and cattle TIMP-2, and chicken (Ch) and mouse TIMP-3. A probe based on the ChIMP-3 can be used to isolate DNA encoding comino acid sequence (R65000) is used to isolate DNA encoding thuman TIMP-3 from a human CDNA library. Human TIMP-3 can be used to the diagnosis, therapy or prophylaxis of conditions characterized by excess or unwanted matrix metalloproteinase conditions."

Claim 8; Fig 2; 65pp; English.

Q73088 encodes R62769 human metalloproteinase inhibitor (MI), it may be used to inhibit tumour cell dissemination and for treating rheumatoid arthritis, dystrophic epidermolysis bullosa, emphysema and osteoporosis. The DNA may be used to detect MI gene disorders.

A probe was synthesised based upon the protein sequence information. It was used to screen a LambdaGem-4 cDNA library prepared from human melanoma cells. 239 positives were identified from a total of 750,000 plaques screened Further analysis and screening with additional probes eliminated most of the clones. Clone pSS38 was isolated and the nucleotide sequence of the cDNA insert was determined. The deduced amino acid sequence showed excellent agreement with that derived by directly sequencing the TIMP-2 protein.

A probe was synthesised the amino acid sequence determined. A probe was synthesised based upon the protein sequence information. It was used to screen a LambdaGem-4 cDNA library prepared from human melanoma cells. 239 positives were identified from a total of 750,000 plaques screened. Further analysis and screening with additional probes eliminated all but two clones (pSSI5 and pSSI8). Both were sequenced and found to encode CSC-21K (-TIMP-2), a novel metalloproteinase inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     13-MAR-1990; 494796.

            New matrix metallo-proteinase inhibitor - used to treat diseases resulting from matrix metallo-proteinase activity and in diagnosis, detection and purificn.. Disclosure; Fig 5; 54pp; English.

Protein was isolated from human melanoma cell-conditioned media gelatin-affinity chromatography.

It inhibits matrix metalloproteinases and can be used to treat diseases such as arthritis, diabetes, cancer, ulcers of mucosa a diseases such as arthritis, diabetes, cancer, ulcers of mucosa a

Disclosure; Fig 6B; 54pp; English.

TIMP-2 was isolated from human melanoma cell-conditioned media and the amino acid sequence determined. A probe was synthesised based upon the protein sequence information. It was used to screen a LambdaGem-4 cDNA library prepared from human melanoma cells. 239 positives were identified from a total of 750,000 plaques screened. Further analysis and screening with additional probes eliminated all but two clones (pSS15 and pSS18). Both were sequenced and found to encode CSC-21K (-TIMP-2), a novel metalloproteinase inhibitor.

This is the amino acid sequence deduced from the cDNA sequence of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

Part of TIMP-2 metalloproteinase inhibitor, encoded matrix metalloproteinase inhibitor; TIMP-2; pSS18.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            granulomatous diseases and myocardial infarctions. It can also be used as a birth control agent by preventing embryo/placental attachment or invasion. Other therapeutic benefits may also be obtd. in diseases with basement destruction or myocyte destruction. See also Q05937, R06746-R06750, R06894 and Q05938-Q05940.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 90-290097/38.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TIMP-4 can be used to treat disorders associated with excessive metalloprotease expression, e.g. tumour metastasis, anglogenesis and growth, osteoarthritis, osteoprosis, pulmonary emphysema, periodontal disease and rheumatoid arthritis, and for contraception. TIMP-4 CDNA can be used for gene therapy of such disorders and in diagnostic assays for TIMP-4 mRNA in cells and tissues. Oligonucleotide fragments of the TIMP-4 CDNA and antagonists or inhibitors of TIMP-4 can be used to treat disorders associated with over-expression of TIMP-4, e.g. to promote healing of corneal and diabetic ulcers and ulcers/lesions caused by microorganisms. Antibodies to TIMP-4 can be used to diagnose such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DNA encoding a tissue inhibitor of metallo:proteinase(s), TIMP-4 for production of recombinant protein for treating tumours, arthritis, etc., and for contraception Claim 1; Fig 1; 24pp; English.

This sequence is a tissue inhibitor of metalloproteinases designs TIMP-4. The cDNA clone was identified with Incyte Clone No. 5893
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      03-NOV-1997 (first entry)
Tissue inhibitor of metalloproteinase, TIMP-4; Incyte Clone No. 589345;
Tissue inhibitor of metalloproteinase; TIMP-4; Incyte Clone No. 589345;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (INCY-) INCYTE PHARM INC. Human tissue inhibitor of metalloproteinase-4 (TIMP-4) (R98265)
Is a novel member of the TIMP family. Its amino acid sequence was deduced from a cDNA clone (T34433) obtd. from an early stage human brain. The sequence shows 40% identity to human TIMP-2.
Recombinant TIMP-4 can be expressed in e.g. E. coll, COS or insect cell hosts. It can be used to treat patients in need of TIMP-4 (e.g. cancer, arthritic diseases, bone resportion diseases, Paget's disease, hyperparathyroidism and cholesteatoma), and to screen for antagonists useful for treating patients in need of TIMP-4 inhibition (e.g. for tissue repair and remodeling). It can also be used in
                                                                                                                                                                                                                                                                                                        29-JAN-1998 (first entry)
Human TIMP-1/TIMP-3 fusion protein.
TIMP-3; human; antibody; TIMP-3-mediated disease; malignant tumour cell;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Tissue inhibitor of metalloproteinase-4 (TIMP-4). Tissue inhibitor of metalloproteinase-4; TIMP-4; bone resorption; Paget disease; hyperparathyroidi
                                                                             Misc-difference

Example 12; Page 34-35; 37pp; Japanese.

This sequence represents a fusion protein between the human TIMP-1 and TIMP-3 proteins. This sequence was used to test the specificity of the connoclonal antibody (MAD) of the invention. The MAD of the invention reacts specifically with human TIMP-3 (see W30308), by specific recognition of the TIMP-3 fragments represented by W30305-W30307. The MAD can be used in the study or diagnosis of TIMP-3-mediated diseases, can be used in the study or diagnosis of TIMP-3-mediated diseases, can be used for the detection of malignant tumour cells, or the castablishing an immunoassay for TIMP-3 or in purification of TIMP-3. The transformed cells can be used for producing TIMP-3 or its equivalent proteins on a large scale. The immunoassay method for TIMP-3 the MADs is simple, highly reproducible and highly sensitive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cancer, and cancers, etc. cell disorders, etc. cell disorders, etc. cell disorders, etc. Example 4; Page 68-69; 112pp; English.

The product (R84216) of Timp3clone2 cDNA clone (T02360) is a natural variant of the Timp3clone7 clone product (R84215), lacking part of the signal peptide. The product, TIMP-3, is a novel tissue inhibitor metalloproteinase. Recombinant TIMP-3 be expressed in prokaryotic or eukaryotic host cells and used the control of the con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TIMP-3 clone-2 product.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                      develop prods. for diagnosis, therapy or prophylaxis of conditions with unwanted matrix metallo:proteinase activity. Disclosure; Fig 11: 87pp; English.

Human TIMP-3 can be used for the diagnosis, therapy or prophylaxis of conditions characterized by excess or unwanted matrix metalloproteinase activity, e.g. neoplasias, tunor metastasis, inflammatory disorders such as rheumatoid arthritis, ulcerations, reaction to infection, periodontal disease or osteoporosis. It can also be used in drug screening/design.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The product (R84215) of Timp3cione7 cDNA clone (T02359) is a novel tissue inhibitor metalloproteinase, designated TIMP-3. Recombinant TIMP-3 can be expressed in prokaryotic or eukaryotic host cells and used to treat degradative diseases of connective tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          13-APR-1995.

1 mgaaars1plafc1111gt1.....cawyrgaappkqefldiedp 220

Searched: 69112 seqs, 25083644 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot35 1:swiss1

Statistics: Mean 44.292; Variance 65.300; scale 0.678

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
